Ideation Phase
Brainstorm & Idea Prioritization

Date	18/10/2026
Team ID	
Project Name	i-Movies — Movie Ticket Booking System
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

This document records problem identification, brainstorming, and idea prioritization for i-Movies, a full-stack movie discovery and ticket booking application.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Problem Statement: Moviegoers need a convenient way to discover movies, compare theatres and showtimes, select seats, and manage ticket bookings online. i-Movies brings these activities together in one application, with separate administration features for managing movies, theatres, shows, and bookings.

Step-2: Brainstorm, Idea Listing and Grouping

Brainstorm

- Browse and search movies; filter by genre and sort by release date or title.
- View movie details, theatres, showtimes, and seat availability.
- Register, sign in, and manage the user profile.
- Select available seats, create bookings, view booking details, and cancel bookings.
- Save favourite movies and submit reviews and ratings.
- Provide an administrator portal to manage movies, theatres, shows, and bookings.

Grouping of Ideas

Group	Ideas
Movie discovery	Browse, search, filter, sort, and view movie details.
Booking workflow	View showtimes and seats; create, view, and cancel bookings.
User engagement	Profiles, favourites, reviews, and ratings.
Administration	Manage movies, theatres, shows, seat pricing, and bookings.

Step-3: Idea Prioritization

Prioritization Method: Ideas are assessed by expected impact on users and feasibility of implementation. The priorities below are a qualitative first-pass assessment based on the documented features.

High Impact / Core Functionality

- Movie discovery and access to movie, theatre, and showtime details.
- Seat selection and ticket booking, including viewing and cancelling bookings.
- Administrator management of movies, theatres, shows, and bookings.

Supporting Functionality

- User profiles and persistent sign-in.
- Favourite movies, reviews, and ratings.
- Theme switching and in-app notifications.

Prioritization Note: The core booking workflow is prioritized because it directly supports the main purpose of the system. This is a qualitative assessment, not a measured user study.

Step-3: Idea Prioritization

Impact vs. Feasibility Matrix

Position ideas according to importance to users (vertical axis) and ease of implementation (horizontal axis). The suggested placements can be adjusted to reflect the team's discussion.

Impact	Lower Feasibility	Higher Feasibility
Higher	Advanced improvements [Add if applicable]	Movie discovery Seat selection and booking
Lower	Optional future enhancements	Profiles, favourites, reviews Theme and notifications

Priority Outcome: Focus first on a reliable movie discovery and booking flow, then support it with account and user-engagement features. Administrative tools support the maintenance of movie and show information.
